Dear John,

I was just informed by Mike Iadarola that Betsy has passed away. This is really sad news. I am not sure if you remember me, but I was one of the postdocs in the lab 1981-1983. Betsy was the cohesive force of the hard-working and productive group. I have many memories of the good times in the lab and outside of Betsy. We also met a few times during those years.

Betsy was an essential person in the NIMH lab for in many different ways. She had always something positive to say, and she also cared very much of us postdocs. She also taught me essential skills in neuropeptide analysis, and I cherish warm memories of her.

With kind regards, I send my condolences on the passing of Betsy
